Introduction

The **ZOWIE Sync** is an mobile app that helps manage display settings (or called "profile") easily from your mobile device. With this app you can:

- adjust your display settings quickly from your device;
- export to share the display settings easily;
- import and apply settings provided by gamers or friends.

The app works best with monitors of the same model name. It also works with other monitors from the BenQ XQ series, but the color consistency may vary due to native color variation between different models.

① Note

Images and menu options in this document are for reference only and may look different according to different BenQ displays or the operating system of your device. The user interface may subject to change without prior notice.

System requirements

Item	Descriptions
OS system	• iOS • Android
Compatible monitors	ZOWIE XQ monitors

Setup

The app works only with compatible ZOWIE monitors. It scans and detects the connected monitor(s) when the app is launched.

Get ready before you start

1. Make sure your mobile device is NFC-supported and is able to access the app store.
2. Make sure the monitors in use are ZOWIE XQ series monitors.
3. Enable **Notifications** from your device's settings so you can be notified when settings for new game titles are released online.

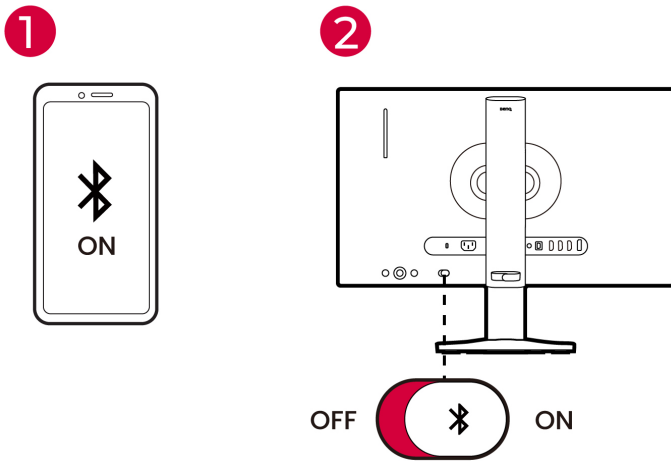

Download and launch ZOWIE Sync

1. Search and download the **ZOWIE Sync** app from App Store/Google Play or ZOWIE.BenQ.com to your mobile device.

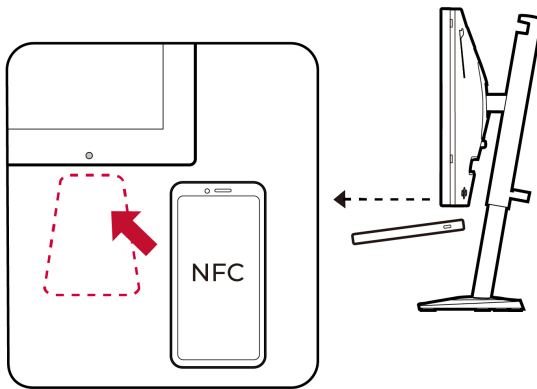

2. Launch the app and follow the on-screen instructions. Enable Bluetooth on both your mobile device and the monitor. The Bluetooth switch of your monitor is located on the rear of

the monitor.

3. Tap your device's NFC sensor against the NFC detection area on the monitor. The NFC sensor location varies by device. Check the device's user guide for details.

4. Your device vibrates as the Bluetooth pairing is done. Tap the notification on your device to bring up the main page. The monitor's display settings are copied and synced to the app by default in the first connection.

Note

- The app's interface follows the operating system language setting and cannot be changed from the app.
- If you have enabled Bluetooth on both your device and the monitor yet the device keeps searching, go to **More > Permissions** and make sure Bluetooth is **ON**.

Reconnect to a paired monitor

Once paired, the device is connected automatically within the monitor's Bluetooth effective range.

The monitor can be connected with one device at a time. If your connection is not made automatically, the monitor might be occupied by another device. Simply align the NFC sensors of both your device and the monitor to reconnect.

- If **Gamer 1 / Gamer 2 / Gamer 3** is applied:
When inconsistent settings are detected between the monitor and the app, you are prompted to keep your monitor settings or sync from the app. The selected source will serve as the baseline and overwrite existing data.
- If a mode other than **Gamer 1 / Gamer 2 / Gamer 3** is applied:
You will be guided to the **Settings** page.

Reconnect to multiple monitors

The app supports one active connection at a time but can store profiles for up to four monitors. This allows you to manage multiple displays from a

single device.

Select from the model list in **Home** page to view profiles of each monitor. A numeric suffix is added to distinguish monitors of the same model name.

Overview

Home page

No.	Descriptions
1.	Model list Shows compatible and connected monitors.
2.	Gamer mode list Shows Gamer 1 / Gamer 2 / Gamer 3 settings of the selected monitor. Gamer mode settings
3.	Switches to manage the gamer mode's settings. See Adjust and save display settings on page 14 for details.

No.	Descriptions
	Control switch
4.	Switches between gamer mode list and controller. See Remote control your monitor menus on page 19 for details.
5.	Home page
	Settings page.
6.	See Adjust and save display settings on page 14 for details.

Optimize your preferred color settings

Modify existing color modes and save them as custom profiles. This allows you to tailor your display to the specific visual requirements of different game titles.

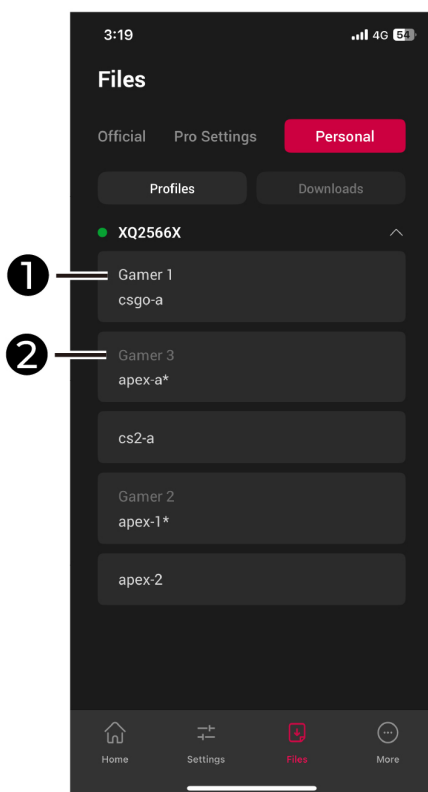

Adjust and save display settings

Switch to the **Settings** page to adjust settings quickly.

1. Choose one color mode from the mode list as the baseline.
2. Adjust items as needed. Available items and options vary by current monitor configurations and input source. Higher values increase the intensity of the effect.
3. The adjusted settings will be saved to the current mode and are synced between the monitor and the app by default. You can click **Save** to name and save the adjusted settings as a new profile, or click **Reset Mode** to restore to factory default values. The saved profiles can be accessed from the **Files** page > **Personal** > **Profiles**.

Apply your own profile

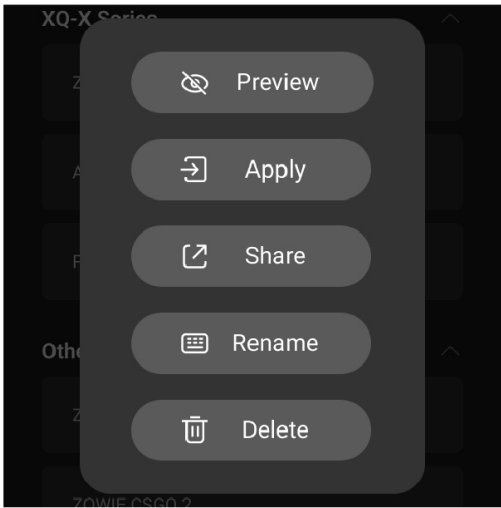

1. Go to the **Files** page > **Personal** > **Profiles**.
2. Select a preferred profile.
3. Select **Preview** to apply the profile temporarily for preview. Select **Apply** and decide which gamer mode to apply the display settings.

No.	Descriptions
1.	Current gamer mode and applied profile.
2.	The "*" mark indicates that the applied settings are not consistent with the profile.

Manage your profiles

Manage profiles saved or downloaded to the app from **Files** > **Personal**.

Preview*	Apply the selected profile temporarily for preview.
Apply*	Apply the selected profile to a gamer mode.
Share	Share the selected profile.
Rename	Rename a profile.
Delete*	Delete a profile.

ⓘ Note

*: Not available for profiles that have been applied to gamer modes.

Apply color settings across monitors

Apply color settings across monitors easily to ensure consistent gaming experience.

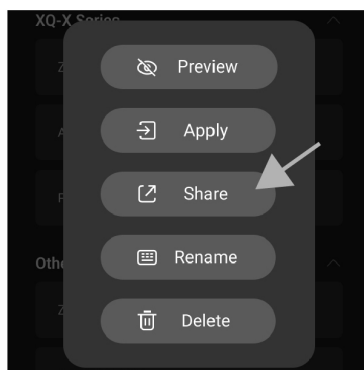

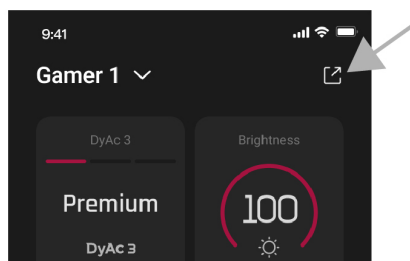

Copy your profiles to another monitor

Settings saved in **Gamer 1 / Gamer 2 / Gamer 3** can be transferred to another monitor by **ZOWIE Sync**.

1. Make sure the profiles you want to transfer are saved and applied to the 3 gamer modes.
2. Tap your device's NFC sensor against the NFC detection area on the other monitor. Select **App** as the baseline to transfer the gamer mode settings to the monitor.

Share your profile with others

You can share the current mode (which is exported as a profile) from the **Settings** page or share a profile from the **Files** page.

The exported profile will be saved in *.mccs format

with a given filename:

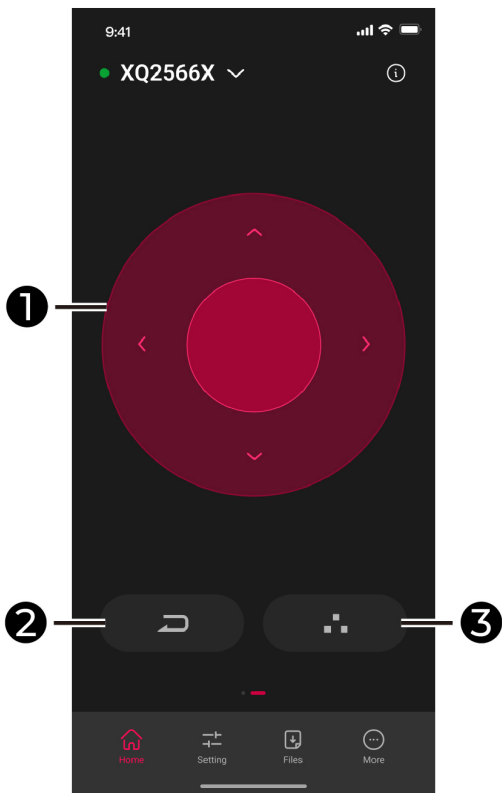

Monitor model name-profile name.mccs

If you want to export the current settings directly from **Settings**, follow the on-screen instructions to name the profile. The filename needs to be within 150 characters.

Remote control your monitor menus

Use your mobile device to remote control the monitor menus. The changes take effect immediately.

Swipe left in the **Home** page to bring up the controller.

No.	Descriptions
1.	Works the same as the monitor's 5-way controller.
2.	Exit
3.	Works the same as the S Switch key. The designated function is defined in Custom > S Switch Key on the monitor.

Import profiles shared by others

Obtain more color settings from a trustworthy source, including official ZOWIE website, Pro Settings, and your friends.

Access profiles from official website

1. Go to the **Files** page > **Official**. Profiles shared by ZOWIE may be updated without prior notice.
2. Select a profile to apply it directly to your monitor. A notification will appear if the selected settings already match your current monitor configurations.

Access settings shared by pros

1. Go to the **Files** page > **Pro Settings**.
2. Browse for preferred players and settings shared by them. You can try with their setting preferences and save as a profile.

Load profiles from cloud or storage

1. Go to the **Files** page > **Personal** > **Downloads**.
2. Click  to browse your storage space for available profiles in *.mccs format.
3. Tap the newly downloaded profile to manage or apply. See [Manage your profiles on page 16](#) for details.

Look for assistance

Should you have any problem, go to **More > Help & Feedback** for FAQ to see if your problem can be resolved.

Alternatively, click  on the upper-right corner of the FAQ page for more support.
